

How to: Go online via CAN connection

Normally, the IDE always connects to the runtime system via Ethernet.
But it is also possible that the IDE can also connect via CAN.

Prerequisite:

- The runtime must support this
- The gateway must be set up accordingly

The following config entries are necessary in the Gateway.cfg file:

```
[ComponentManager]
Component.1=CmpBlkDrvCANClient
Component.2=CmpPCANBasicDrv
;Component.5=CmpNameServiceServer

[CmpRouter]
0.MainNet=<NetzwerkName>
1.MainNet=BlkDrvCanClient

[CmpBlkDrvCanClient]
0.Name=BlkDrvCanClient
0.NetId=0                ; CANbus Network Id (0..n)
0.Baudrate=500           ; CANbus Baudrate in kbit/s
0.NodeId=1               ; unique NodeId im CanNetz
```
